04 Workflow automation and integrations

Service guide

Web apps, client portals, AI assistants and automations for growing businesses that have outgrown spreadsheets and copy-paste. You talk directly to the people writing the code.

Every business has a slow part. We write the software that fixes it.

bigO is a small software studio in Delhi NCR, building for businesses in India and abroad. We design, build and look after custom software, and you talk directly to the people writing the code.

`O(n) → O(1)` In engineering, Big O describes how work grows as a business grows. We take the jobs that grow with every order, client or message, and make them stay small.

Free first call
No set length, no obligation

Scope in writing
Agreed before any work starts

You own the code
Code, designs and accounts are yours once paid

30 days of fixes
Any bug after launch, fixed free

“I started bigO because good software shouldn't need a big agency.”

We keep the team small on purpose. The people on your first call are the people who design and write your code, so nothing gets lost in hand-offs. We agree the scope in writing before we start, we show you progress as we go, and we stay around after launch to keep things working.

Alok Kumar · Founder, bigO

How every engagement works

Every project, from a single automation to a full platform, runs on the same terms: scope agreed in writing, progress you can see, and support after launch.

01	**Free first call**	No set length and no obligation. We listen to how your business works today and tell you honestly whether software is the answer. We will sign an NDA before you share any details.
02	**Written proposal**	Scope, technical plan and timeline, split into milestones. Nothing starts until you have agreed it in writing.
03	**Design first**	User flows and interface design are agreed before development, so you see how it will work before it is built.
04	**Build in milestones**	Payments follow milestones. Every change gets its own preview link you can try before it goes live.
05	**Test and launch**	Forms, integrations, payments and permissions are checked end to end on phones, tablets and desktops before launch.
06	**30 days of fixes**	Any bug found in the 30 days after launch is fixed free.
07	**Care plan, if you want one**	A monthly plan covering security updates, backups, monitoring, bug fixes and small changes.

OWNERSHIP

You own the code, designs and accounts once the project is paid in full.

Code is readable and documented, and every account is in your name, so any developer can pick it up later.

ALREADY HAVE A SYSTEM?

We usually start with an audit, then fix, improve or extend what is there. We also connect the tools you already use: CRM, accounting software, forms, email and WhatsApp.

01

Web apps and internal tools

Custom systems built around how your business works, replacing spreadsheets and manual steps.

Right for you if

- Your business runs on spreadsheets that keep breaking
- Off-the-shelf software forces you to work its way, not yours
- Several people need different access to the same information

What we build

- Dashboards and admin panels
- Order, booking and job management systems
- Marketplaces and multi-sided platforms
- Installable web apps (PWA) for phones and desktops

What's included

01 Requirements, scope and a technical plan agreed up front

02 User flows and interface design before development

03 Front end, back end, database and hosting

04 Logins, roles, payments and security

THE PROBLEM IT SOLVES

The business runs on spreadsheets that break, get overwritten and can't grow.

BEFORE

1. Several versions of the same spreadsheet
2. Formulas break and data gets overwritten
3. Everyone can see and edit everything
4. No record of who changed what

AFTER

1. One system everyone works in
2. Each person sees what their role needs
3. Every change is recorded
4. Reports are ready when you need them

One reliable system, with the right access for each person and a full history.

EXAMPLE FROM OUR WORK

Hirearn · Marketplace web app · hirearn.com
A two-sided marketplace and installable app that connects people with local jobs and services.

02

Client portals

A secure place where your customers log in to track progress, share files and pay invoices.

Right for you if

- Clients regularly call or email to ask for updates
- Documents and approvals get lost in email threads
- You want to look more organised than your competitors

What we build

- Customer accounts with secure login
- Project or order status pages
- File sharing, approvals and messages
- Invoices and online payments

What's included

01 A walkthrough of how you work with clients today

02 Your branding on every screen

03 Admin tools for your team

04 Testing on phones, tablets and desktops

THE PROBLEM IT SOLVES

Customers keep calling and emailing to ask where things stand.

BEFORE

1. Client calls to ask for an update
2. Someone finds the file and checks progress
3. Documents go back and forth by email
4. Invoices get chased by phone

AFTER

1. Client logs in to their own portal
2. Sees status and next steps at any time
3. Downloads and approves documents
4. Pays the invoice online

Clients log in to see progress, documents and invoices for themselves.

03

AI chatbots and assistants

Assistants that answer questions from your own documents and data, on your website, WhatsApp or inside your product.

Right for you if	What we build
Your team answers the same questions every day	Website and WhatsApp assistants
Customers wait for replies outside office hours	Internal assistants that search your documents
Information is spread across documents nobody can search	Data extraction from PDFs, emails and web pages
	Drafts and summaries for replies and reports

What's included

01 A review of where AI helps your process, and where it doesn't

02 A working prototype on your real data before the full build

03 Checks, fallbacks and hand-off to a person where accuracy matters

04 Running costs kept visible

THE PROBLEM IT SOLVES

The same questions arrive all day on WhatsApp, email and your website.

BEFORE

1. The same questions arrive all day
2. Staff stop work to answer each one
3. Replies wait until office hours
4. Answers vary by who replies

AFTER

1. Questions are answered instantly, day and night
2. Answers come from your own information
3. Anything complex is passed to a person
4. Your team handles only what needs them

Common questions are answered instantly, and anything complex goes to a person.

Also for documents: Useful information is stuck in PDFs, emails and other websites. Clean, structured records you can search, filter and report on.

EXAMPLE FROM OUR WORK

Nexora · AI data pipeline · nexora-8y5.pages.dev
An automated pipeline that finds scholarships, grants and fellowships across hundreds of sites and keeps them up to date on its own.

04

Workflow automation and integrations

We connect the tools you already use and automate the manual steps in between.

Right for you if	What we build
Someone on your team copies data between tools every day	Connections between your CRM, accounting, forms, email and WhatsApp
Orders, leads or bookings arrive in several places	Automatic order, lead and booking processing
Reports take hours to put together by hand	Scheduled reports and alerts
	Pipelines that collect and update data on their own

What's included

01 A map of the current process and where time goes

02 Automations with logs, so you can see what ran and when

03 Error alerts and a simple way to retry

04 Documentation your team can follow

THE PROBLEM IT SOLVES

Your team copies the same data between spreadsheets, email and other tools.

BEFORE

1. Order arrives by email
2. Someone copies it into a spreadsheet
3. Then re-types it into invoicing
4. Mistakes are found later, by customers

AFTER

1. Order arrives by email
2. Saved to your sheet and invoicing automatically
3. Checked for missing details
4. Your team gets a short summary

Data moves between your systems on its own, without retyping or mistakes.

EXAMPLE FROM OUR WORK

Nexora · AI data pipeline · nexora-8y5.pages.dev
An automated pipeline that finds scholarships, grants and fellowships across hundreds of sites and keeps them up to date on its own.

Supporting services

Available around the software we build, when your project needs them.

Websites and online stores	Fast, search-friendly business websites with booking, payments and WhatsApp built in.
UI/UX and brand design	Interface design, prototypes, logos and brand guidelines for the products we build.
Care and maintenance	Security updates, backups, monitoring, bug fixes and small changes, on a monthly plan.
Technical consulting	Audits of existing websites and apps, product roadmaps and help choosing the right tools.
Digital marketing	SEO, social media, ads and email for clients who want help being found.

Which service do I need?	
Copy-paste between tools	**Workflow automation and integrations**
Customers chasing updates	**A client portal**
Same questions all day	**An AI assistant trained on your own information**
Spreadsheets that break	**A custom web app or internal tool**
Data stuck in documents	**AI data extraction**

Not sure? Describe the problem on the first call and we will recommend the smallest thing that solves it.

Built like it has to last.

Your business will depend on what we build, so every project gets the same engineering basics.

01
Security from day one
Logins, role-based access, encrypted connections and secrets kept out of the code. People only see what their role needs.

02
Tested before every launch
Forms, integrations, payments and permissions are checked end to end, on phones, tablets and desktops.

03
Fast on real phones
Server-rendered pages, compressed images and lean code, so it stays quick on mobile data and older devices.

04
Every change previewed
All code lives in Git. Each change gets its own preview link you can try before it goes live, and any release can be rolled back.

05
AI with guardrails
Validation, fallbacks and a hand-off to a person where accuracy matters, with running costs kept visible.

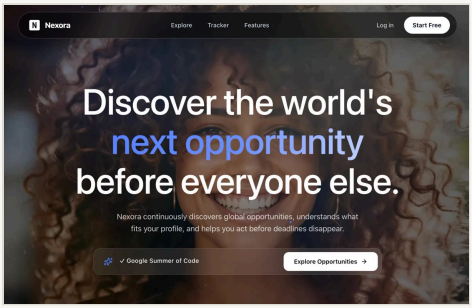

06
Yours to keep
Readable code, written documentation, and every account in your name, so any developer can pick it up later.

Technology we use

Front end	`React · Next.js · TypeScript · Tailwind CSS`
Back end	`Node.js · Python · FastAPI · Hono`
Data	`PostgreSQL · Supabase · MongoDB`
AI and automation	`LLM APIs · Vector search · GitHub Actions`
Hosting and payments	`Vercel · Stripe`

Selected work

Shipped, live and in use.

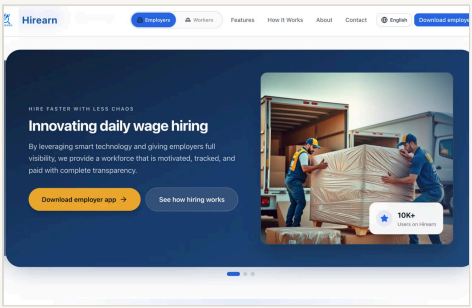

AI data pipeline · Live · nexora-8y5.pages.dev

Nexora

A pipeline that collects listings on a schedule, uses AI to turn messy pages into clean records, removes duplicates and re-checks everything over time. Users search in plain language and track their applications up to the deadline.

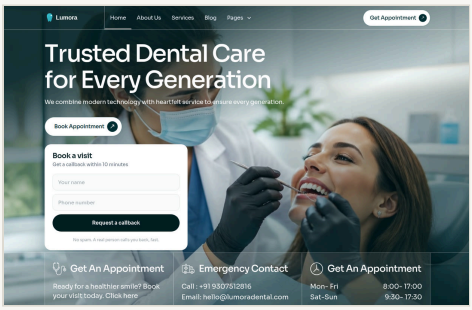

Python / FastAPI / PostgreSQL / React / Groq / GitHub Actions

Marketplace web app · Live · hirearn.com

Hirearn

A complete web platform where people post what they need and local providers find it and take it up. It installs on phones like an app and is structured to add more categories and cities.

Clinic website with booking · Live · yagyaxsen.github.io/lumora-dental

Lumora Dental

A complete clinic website: clear pages for each type of treatment, the team, patient stories and a blog. Every appointment button leads to online booking, and a callback form sits on the first screen.

HTML / CSS / JavaScript / GSAP / GitHub Pages

In progress

Ongoing client engagement · Ongoing

Catering business, Thailand

An ongoing engagement covering the technical foundation that supports operations as the business grows, and the online presence that puts it in front of new markets.

Questions and contact

How long does it take?	That depends on the scope. Your proposal includes the timeline, split into milestones so you can see progress as it happens.
Who owns the code and designs?	You do. Once the project is paid in full, the code, designs and accounts are yours.
Can you work with the tools we already use?	Yes. Connecting the tools you already use, such as your CRM, accounting software, forms, email and WhatsApp, is a core part of what we do.
What happens after launch?	Any bugs are fixed free for 30 days. After that, a monthly care plan covers updates, backups, monitoring and small changes, if you want one.
Will you sign an NDA?	Yes. We're happy to sign one before you share any details.
Can you work on a system we already have?	Yes. We usually start with an audit, then fix, improve or extend what's there.
Do you work with clients outside India?	Yes. We're based in Delhi NCR and work with clients online, including an ongoing project for a catering business in Thailand.

Tell us what's slowing your business down.
